

Function	Issue	Cause	Workaround	Fix planned for Version	Notes
Video Playback (Windows)	Opening Video Window (Direct Show Player) or importing video files can affect sample rate of the ASIO audio card	If the ASIO audio card is also set as preferred audio device in the Windows Multimedia panel, the Direct Show player accesses this card in the moment it becomes active.	If this happens frequently, a dedicated soundcard (or built in soundchip) should be set as preferred audio device in the Windows Multimedia panel.	2.02	
Video Playback (Windows)	Video thumbnails are sometimes black (Direct Show Player)	Incompatibility with some codecs	Try Video For Windows player if it supports the video file codecs in use	2.02	
Video Playback (Windows)	Importing video files with certain codecs can cause crash (example: DIVX)	Incompatibility	Prefer standard video codecs	2.02	
Video Playback (Mac)	Stuttering Playback of video files through Firewire OUT	Performance problem	Try less compressed video codec (e.g. DV format)	2.02	
Video	"Prepare Archive" does not seem to work for video files if video is present on video track	It does work, but the path to the video file is not updated correctly.	Re-import the video file manually after the archive preparation	2.02	
Video (Mac)	Importing MPEG1 video files does not work	System Incompatibility	Use different compression instead	under investigation	
Markers	Paste Time doesn't work on Marker Track	Bug		2.02	
OMF Export	Exported OMF-2 is empty if the project contains "missing audio files"	Bug	Use the pool function "Remove Missing Files" before exporting the OMF	2.02	
OMF Export	Clips have wrong length	If there are layered clips in the Nuendo project, the OMF may load with wrong clip lengths into other OMF capable DAW	Clean up layered events before exporting as OMF	OMF implementation will be improved by releasing separate files aside from Nuendo maintenance releases	
Timestretch	Inaccurate results if the Timestretch	Depending on the algorithm	Use the Time Stretch Offline	2.02	

	Tool is used in the project window	selected, modifying the event length using the Time Stretch tool	Audio Process instead		
Pitch Shift	Possible Crash if the Accuracy parameter is changed while the preview is running	Bug	Avoid this.	2.02	
MIDI	Sysex Transfers are sometimes erratic when using MIDEX 8 interface	Direct Music incompatibility	Try different MIDI interface if available	2.03	
MIDI	Recording MIDI notes from screen keyboards on Plugin interfaces causes endless MIDI notes	Bug, happens when Cycle is ON	Deactivate Cycle or Play MIDI from keyboard	2.02	
Plugins	FX or VST Instrument plugins sound strange (like having a "feedback")	Some plugins are incompatible with the new plugin handling method of Nuendo 2.0	Enable "Old Host Behaviour" compatibility mode in the Plugin Information Window. Please note that the mode works after re-loading the plugin.	new Plugins will be compatible	
Plugins	Wavelab plugin "Leveler" crashes	Bug in the plugin	Don't use that plugin in Nuendo 2.0	new plugin will be made available	
Automation	"Step Designer" MIDI plugin "pattern change" automation can not be written	Bug	Use the function to record the "pattern changes" as MIDI notes		
Automation	Automation is read inaccurately	If the ASIO blocksize (latency) is very big, the automation is read inaccurately	lower the ASIO buffer size	2.03	
Plugins	Waveshell does not work	Nuendo utilizes new Waveshell	Update Waveshell to version 4.0.1	under investigation	
Plugins / Cubase SX import	Halion 2 loads with 'pending connections' if the imported Cubase SX project contains Halion 1.x	Halion incompatibility	re-configure the connections and save the project	2.02	
Plugins	Virtual Guitarist automation does not work after storing the project	Bug in Virtual Guitarist can cause loss of the automation parameter connections	If you run into this problem, please render the automation into track mixdowns before closing the project	Will be fixed in VG update.	
Plugins	Plugins that play synced to the tempo play out of sync	Plugins, that receive tempo information (e.g. "Groove Agent") play out of sync if	Bug	2.02	

		an FX plugin that introduces a delay is present in the mixer. The delay compensation does not affect the tempo information sent to the plugin			
Surround Mixing	Surround Output Channel Order is wrong on imported Nuendo 1.6 Projects	Nuendo 1.x projects: when opening surround projects with master inserts loaded, Nuendo 2.0 will not be able to recognize the channel order for export. Individual settings for channels may appear on wrong channels in Nuendo 2.0. This is valid for all master setups in Nuendo 1.x other than L, R, C, LFE, Ls, Rs (the Nuendo 2.0 default 5.1 surround setup).	Prepare the Surround Projects in Nuendo 1.6 before importing them into Nuendo 2.0	2.03	For more information, please refer to readme file "Routing compatibility for list 5.1 Surround.pdf" This is releases with the Nuendo update patcher or can be found in the folder "Readme Files" on your Nuendo program CD.
Surround Mixing (Windows 2000)	Imported WMA Surround File appears as stereo mixdown in the project(Windows 2000 only)	Dissolving a multichannel WMA file only works on Windows XP. Using Windows 2000, a downmix is made to stereo. This is due to a WMP limitation of non-XP players.	Use Windows XP Operating System if this function is required		
Recording	Recording using the Punch In / Punch Out at locators leads to inaccurate file lengths	Inaccuracy	The timing positiones are however correct and the timestamps of the files do mention this, thus there's no workaround needed. If you discover a unacceptable gap at the beginning of the recording, it's recommended to set the L locator a little bit earlier	under investigation	
Recording	Recording from a "Child Bus" of an input channel including plugins that introduce a delay results in not properly positioned clips	Bug	Record from main busses or don't use delay-introducing plugin	2.02	
Scrub Tool	The Scrub Tool	Bug		2.02	

	reacts with a delay. Depending on the system CPU load it takes a little while after pointing until the scrub tool works				
Tempo Track	Function Audio/Advanced/Set Tempo from Event can crash	Bug	Make sure the Tempo in the Transport Bar is set to "Tempo Track" instead of "Fixed"	2.02	
Bounce Selection	Bounce Selection doesn't contain desired audio if function was used inside of an audio part	Bug	Dissolve part first and bounce selection then	2.02	
Export Audio Mixdown	Length of the mixdown can be inaccurate if Midex MIDI interface is connected. The Direct Music components of the operating system can cause a timing problem of the audio engine.	System related	If this happens on your system, please use the WindowsMIDI ports instead of the DirectMusic ports of the MIDI interface driver. Please read the "MIDI Portfilter.txt" document.	under investigation	
System related	Setting Audio Priority to "Very High" (Device Setup/VST Multitrack/"Expert") can cause crash on multi processor CPU computers	Bug	Set Audio Priority to "High" or "Normal"	2.0	
System Related	Adding a MIDI Track can disturb the audio engine. (example: MIDEX ASIO Sample rate 8) can be changed or lost.	If a Direct Music MIDI port (example: MIDEX 8) is opened for the first time (f.i. by adding a MIDI track), it may happen Windows Direct Music causes a short system halt, which can disturb Nuendos audio engine.	Goto Device Setup/VST Multitrack and do Reset.	under investigation	
System Related	Some Plugin Effects used as send-FX mac sound distorted in some cases on multi processor CPU computers	possible incompatibility	If this happens frequently, switch OFF Multiprocessing (Device Setup/VST Multitrack/"Expert")	under investigation	
System Related (Mac OS-X)	MOTU PCI 324 Interface driver crashes if the device is clocked externally and you try to change the sample rate from	Incompatibility, most likely a bug in the MOTU driver		Will be fixed in MOTU driver	

	Nuendos project setup				
Cubase SX Project import	VST Instruments do not get automation tracks by default	Incompatibility	Add another VST Instrument, all VST Instrument automation tracks will appear then.	2.02	
Cubase 5.x Song import	Not all parameters from Cubase 5.x Songs are imported	Not yet implemented completely		2.03	
Nuendo 1.6 Project Import	Aux return levels are wrong	Due to a new level structure it is not possible to translate the Aux send levels absolutely correct.	Check the levels after you have imported a project from Nuendo 1.6	No Fix possible	
9 Pin Machine Control	9 Pin Device remote window shows wrong timecode (typically 1 hour ahead)	Bug		2.02	
9 Pin Machine Control	Loading a 9 Pin project may hang if 9 Pin device (e.g. Video Recorder) is turned OFF or not connected	Bug	Make sure the device is connected and turned ON		
9 Pin Machine Control	Tascam DA 98 Track Arming does not work correctly. Other 9 Pin Devices may be affected too.	Incompatibility		continous improvements of 9-pin with every maintenace release	
Generic Remote	Editing EQ via Generic Remote can crash	Bug	Avoid this	2.02	
Remote Controllers	Not all functions and buttons may work	Not yet implemented completely		2.02
